Please help stop climate change

Dear Prime Minister Carney,
My name is Nola, I attend Sunnybrook School in Toronto. I believe that Canada can help slow down climate change if we all work together.

Firstly, climate change is affecting humans and animals all over the globe. In the Arctic and Antarctic snow and ice is melting and it is harder for animals to hunt for food because there are less ice sheets to stand on.

Secondly, if we don't help stop climate

change all the ice in the Arctic and Antarctic will melt and sea levels will rise causing lots of countries, including Canada, to be under water.

Finally, I have some ideas to help stop climate change please consider some of them. People in Canada can plant 10 trees a year, People can replace their old air conditioners and rifrigerators, And you can shut down some factories.

Yours Sincerely,
Nola
